

DIPTUBE

SEEING IS BELIEVING

Manage
your Product.
Manage your
Business.

SEE WHAT IS IN YOUR TANKS

- Is the product inside the tank clean?
- Is your tank or product contaminated?
- Was the correct product delivered to your tank?

SEE HOW MUCH PRODUCT IS INSIDE YOUR TANKS

- Inventory control
- Have you ordered the correct amount of product?

The DipTube is a patented three-in-one tank profiling device which gauges, profiles and visually samples your tank.

1. SAMPLING

The DipTube draws representative samples directly from your tanks:

- Cost Effectively.
- Without interrupting your regular operation.

2. ACCURATE GAUGING

The DipTube uses scientific principles of physical science to accurately gauge the level of the tank:

The DipTube employs the principles of pressure differential, mechanical sealing and a locking mechanism which ensures that the fuel is trapped inside the inner tube when the DipTube is closed.

3. CHARACTERISATION

The DipTube uses principles of density and transparency to characterise the fuel inside your storage tank.

The DipTube will not only indicate if there is any contamination present in the tank, it will also quantify the level of contamination.

The DipTube can be used to confirm if the correct product is delivered to its intended tank, and also show the manager if the incorrect product has been delivered.

THE DIPTUBE ADVANTAGE

Forecourt Safe: The DipTube contains no metallic components and is constructed from very low static generating materials. Safe for hazardous zone operations.

Lifespan: The DipTube has a minimum lifespan of 2 years.

Labelling: The DipTube uses laser engraving technology to ensure that the labelling is permanent. • The laser engraving cannot be removed by diesel or the petrol, hence the prolonged lifespan. • The laser engraving is bold to ensure that the product level inside the DipTube can be easily seen, reducing human errors.

Calibration: Each DipTube is labelled in both centimetres and litres and therefore is self-converting. • With millimetre increments between each centimetre reading, the DipTube is accurate to the last millimetre of the tank.

Weather: The DipTube is not affected by weather conditions, and can be used when it is raining or during peak sunshine. • Dip your tanks at any time of the day or night.

No Extras Required: No more water finding paste - The DipTube does not only detect water but it also shows the exact level of water inside the tank.
